

## BLUESCREEN™

Our new optical Bluescreen is a very special hand cast projection screen, predominantly designed for short throw high resolution projection applications.

The screen is cast with a high concentration of diffusion crystals on one surface and then a clear glass acrylic fascia. This concentration of diffusion crystals means light can be dispersed more evenly across the surface area and providing a superior image quality.

Bluescreen was designed specifically for applications using short throw mirror projectors or projectors with short throw lens options.

### Features

- Transmission: 72%
- Peak Gain: 3.7
- Viewing Angle: 140°
- Thickness: 5mm
- Horizontal half gain (off axis): +/-30°
- Vertical half gain (off axis): +/-30°
