

SOUNDVISION™

Soundvision screens are the world's brightest front projection screens with 360° surface sound technology, the only projection screen where the screen surface is the speaker.

Where brightness, clarity, contrast and audio are required there is only one solution.

This specially designed optical screen has an aluminum coated surface which is highly reflective. The surface area is turned into a speaker, creating the ultimate visual display system.

Soundvision is available in both 10 and 20 Gain solutions, making it the perfect choice for a variety of public venue applications.
