

Interactive Projection Foils

ProDisplay's Interactive Projection Foils transform a glass surface into a touch screen, making them the ideal choice for interactive store window displays.

The optically clear foil has an electrostatic cling liner laminated to the surface, making it ideal for either permanent or temporary applications.

Designed for rear projection, each is delivered as a kit which can be installed in minutes.

Kits are available with a variety of screen material choices, including Clearview, ProDiffusion and Sun Screen, so you can match the product to both your application environment and preferences.

Features

- Projected Capacitive Technology
- Works on Glass up to 20mm thick
